Proposed Ballyglass Solar Array

Dear **XXX**,

Hope all is well. I am writing today to update you on our progress with the Ballyglass Solar project.

Enclosed you will find a draft layout map showing the proposed panel layout along with an indicative substation location and perimeter fencing. I have received several queries regarding the type of fencing that will be used to secure the site and have enclosed an image of the typical deer fencing that will be erected.

The project planning consultants are progressing well with the necessary planning application documentation. Following the current program, we anticipate that the planning application could be submitted to Clare County Council by the end of this month. Public notices will be erected around the site and published in the local newspaper ahead of the application being lodged to the Council.

I have already met several residents in person and really appreciate the support received from the local community. I will continue to update the project website with any additional information that becomes available. Please provide your email address or phone number if you would like to receive an alert each time new information is added to the website. A notice has been placed in the Clare Champion to inform the wider community about the proposal and directing those interested to the project website for information about the project.

If you have any queries or would like to discuss any aspect of this proposal, please feel free to contact me. I am available by email at ballyglassclo@turnkeydev.com, by phone at 086-3979248 or via the "Contact" portal on the project website, www.ballyglassinfo.com.

Yours sincerely,

James Crowley
